

Press Release – Just Aircraft New “Superstol”

Just Aircraft has completed design and testing of a new “Slatted wing” and compatible “Shock Absorber Landing Gear”. The results exceeded expectations!

“This newly completed “Superstol” with a high lift wing and long strut air shock landing gear is the ultimate future bushplane. Fowler flaps and automatic leading edge slats increase wing cord and provide exceptional STOL performance while maintaining the trailerable folding wing.

- At least 10% faster cruise speed
- At least 10% slower stall speed
- Reduced landing distance by 50%

The best of both

The shock absorber gear will be fitted with 29” Tundra Tires that allows an extremely aggressive landing.

The wings can also be supplied on existing planes. Orders are being taken now for fall delivery.
